

Lecture Title Here

Course Name — Lecture N

Your Name

Department of Economics, NTNU

May 13, 2026

- ① Introduction
 - Objectives
 - Motivation
- ② Key Concepts
 - Definitions
 - Theory
- ③ Examples
 - Worked Example
 - Application
- ④ Summary
 - Key Takeaways
- ⑤ References
 - Bibliography

Introduction

Section 1

Lecture Objectives

By the end of this lecture, you should be able to:

- Objective 1: describe the concept
- Objective 2: apply the method
- Objective 3: interpret the results

Motivation

- Why this topic matters
- Connection to previous lectures
- Real-world relevance

Key Concepts

Section 2

Core Definitions

Definition 1

A formal definition of the key concept goes here.

Definition 2

Another important definition for this lecture.

Theoretical Framework

- Main theoretical result or proposition
- Key assumptions and conditions
- Intuition behind the result

The central equation:

$$Y_{i,t} = \alpha + \beta X_{i,t} + \gamma Z_{i,t} + \epsilon_{i,t} \quad (1)$$

Examples

Section 3

Worked Example

Example 1

Consider the case where $X = 1$ and $Z = 0$. Then the model reduces to:

$$Y_{i,t} = \alpha + \beta + \epsilon_{i,t}$$

Interpretation: β captures the treatment effect directly.

Application: Data Overview

Variable	Description	Source
$Y_{i,t}$	Outcome variable	Database A
$X_{i,t}$	Treatment indicator	Database B
$Z_{i,t}$	Control vector	Database C

Table 1: Variable definitions and data sources

Summary

Section 4

Key Takeaways

- ① Takeaway 1: summary of the main concept
- ② Takeaway 2: summary of the key method
- ③ Takeaway 3: practical implications

Next lecture: Topic of the following session.

References

Section 5

References

- [1] Author, F. and Author, S. *Title of the Article*. Journal Name, 2024.
- [2] Author, T. *Textbook Title*, 3rd ed. Publisher, 2023.

Thank You!

Example: Incremental Reveal

Items appear one at a time (overlay specification):

- First point (appears alone, highlighted)

Example: Incremental Reveal

Items appear one at a time (overlay specification):

- First point (appears alone, highlighted)
- Second point (added next)

Example: Incremental Reveal

Items appear one at a time (overlay specification):

- First point (appears alone, highlighted)
- Second point (added next)
- Third point (added last)

Example: Blocks

Standard Block

Used for general information or definitions.

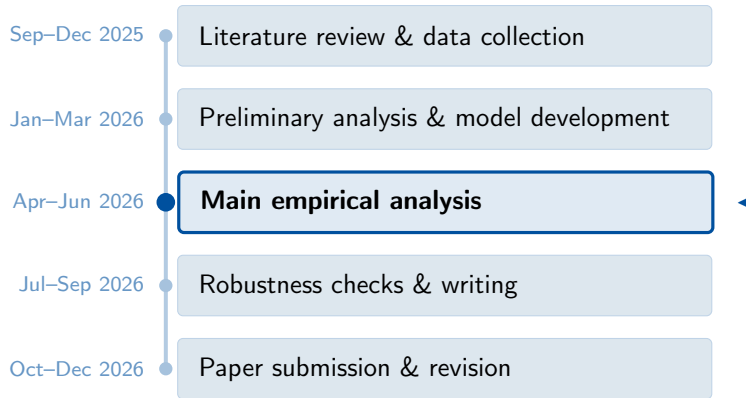

Alert Block

Used for warnings or important notes.

Example Block

Used for examples or illustrations.

Example: Timeline

Example: Table

Phase	Period	Deliverable
Literature review	Sep–Dec 2025	Survey paper draft
Data collection	Jan–Feb 2026	Clean dataset
Model development	Feb–Mar 2026	Working model
Empirical analysis	Apr–Jun 2026	Results tables

Table 2: Project milestones

The baseline regression:

$$Y_{i,t} = \alpha + \beta X_{i,t} + \gamma Z_{i,t} + \epsilon_{i,t} \quad (2)$$

where $Y_{i,t}$ is the dependent variable, $X_{i,t}$ is the treatment, and $Z_{i,t}$ is a vector of controls.

Example: Two Columns

Left column

- Point A
- Point B

Right column

- Point C
- Point D
